

# Powdersafe®

Contaminated Mail Isolation System

The complete Contaminated Mail Isolation System for control of suspicious mail believed to contain dangerous **biological** and **chemical** agents. The Powdersafe® system is certified airtight, designed to Ergonomics principles and allows suspicious mail to be opened in an airtight and safe environment.

Features of the Powdersafe® system:

- **Lightweight** – can be taken to the suspect item reducing the risk of accident. Isolation chamber weighs approximately four kilograms making the chamber **easily transportable**
- **Transport Case** – Double walled, twin independent airtight seals, fully insulated, maximum protection
- **Comprehensive** online tutorials
- Gives the organization **control** not the suspicious mail
- Protects the **evidence** as the contaminated mail stays in the system which is designed to allow easy removal of the threat
- **Ergonomically** designed – user friendly and safe
- Certified **airtight** above International Standards – tested by a NATA certified laboratory (National Association of Testing Authorities of Australia)
- **Patent pending**

Powdersafe meets and exceeds relevant accreditations around the world and is the solution of choice for **governments and corporations around the world** to protect their employees from mail contamination and minimize costly business disruption.
